

# Product Specification Sheet

## Small Evaporative Cooling Fan

Cooling your environment through the power of water. Built to cool your immediate area, our **Small Evaporative Cooling Fan** works by drawing warm air through a cascading water honeycomb pad, distributing a refreshingly cool breeze back into the room. This unit performs best in hot/dry climates with a relatively low humidity level (less than 60%). Key features include: Three-speed fan, Oscillating louvre functions, Operated by Mechanical dials, 50w rated power consumption, Easy roll wheels, 230V domestic plug

The slimline and lightweight design makes the unit discreet and easy to manoeuvre. Using no coolant or compressor, evaporative coolers use considerably less electricity than AC units and with no need to exhaust hot air, they are suitable for enclosed environments with no or non-opening windows.
