Product Specification Sheet

DK95mm Direct Connect Module

Direct Connect cable module for use when connecting cabling up to 95mm directly to the MOD.DU range of enclosures. Particularly useful when forming a tower crane switch, or high current RCD plant switch as either an incoming or outgoing module. Direct Connect cable modules can be used when parallel cables are required, this is easily implemented by using one direct connect module per 4 core cables required. The user must ensure that the requirements of the applicable regulations for their application are used when using direct connect modules, as this module has no overcurrent, switching or earth leakage capabilities.

IP44
