

# INFORMATION SHEET FROM EL-BJÖRN

## Installation procedure for installation and commissioning of El-Björn hot water machines type EBC

1. Fill with water. The machines must not be connected to the power supply. Open the valve fully to allow quick and easy filling and venting of the system.
2. When the system has been vented, the machine is ready to start.

### **Important information!**

After the system is filled with water and vented, follow the procedure below. If the ambient temperature is below +5 °C when starting the EBC machine, it is especially important to follow the procedure below to avoid the risk of the system freezing:

1. Connect the machine to the power supply.
2. Log on to the machine with the code and set the fan speed to zero.
3. Start the machine. The machine will now start without the fan running and the valve will now close and reopen for a period of 10 minutes.
4. After 10 minutes, log on to the machine and increase the fan speed from 0 to the desired fan speed. 85–95% which is the original speed when drying depending on the machine type.

### **RECOMMENDATION!**

When starting outdoors, we recommend that you add anti-freeze to the system to prevent the water from freezing.
